

FOR IMMEDIATE RELEASE

Methods Workshop to Feature Engineering, Costing and Shop Floor Control at Texprocess

The global leader in fashion and sewn products costing and engineering solutions will demonstrate the latest predictive and production costing and methods engineering software along with the new Shopfloor Eye shop floor control solution in Booth #523 at Texprocess Americas on May 3-5 in Atlanta.

Methods Workshop LLC (<http://www.methodsworkshop.com>), the leading provider of engineering and costing software solutions for the fashion and sewn products industries, will feature its recently updated software solutions on May 3 - 5 at the **Texprocess Americas** trade show in Atlanta, Georgia (USA). In addition to providing hands-on demonstrations in **Booth #523** of its **Quick TruCost™ v9** (QTC) early-stage costing software and **Engineered TruCost™ v9** (ETC) production methods engineering and labor costing solutions, the company will also feature **Shopfloor Eye™**, a real-time shop floor control solution that it markets under a newly formed alliance with Atlanta-based Shopfloor Support LLC.

*“We are pleased to be bringing so many new innovations to Texprocess Americas 2016,” said Methods Workshop President **John Stern**. “After launching all new versions of our core standard data costing and engineering software in the past year, we are continuing to update those solutions with many new features and improvements. We are especially excited to be showing the Shopfloor Eye wireless, tablet-based shop floor control solution as it represents a revolutionary step forward in apparel and sewn products manufacturing management. When we saw how it fit so well with our long-time commitment to bringing the best in performance measurement and control to our industry, we knew we wanted to promote it with all of our global clients and at this most important industry event. We look forward to meeting with the many manufacturers, brands and vertical retailers that will attend this important event.”*

Quick TruCost is designed for early-stage design, product development and pre-production costing requirements. By answering eight to ten simple product questions, QTC users can immediately and accurately predict the manufacturing cost of their products. Engineered TruCost enables engineers and other manufacturing professionals to quickly and accurately determine production labor costs, define operational best practices, and benchmark manufacturing performance against global standards. Shopfloor Eye leverages standard, off-the-shelf tablets running Android™ and Wi-Fi networking to collect production data and empower workers, supervisors and managers with real-time production visibility and control.

About Methods Workshop LLC

Methods Workshop is a leading developer and marketer of engineering and costing software solutions for the global fashion and sewn-products industries. Since its inception in 1982, Methods Workshop has provided more than 400 apparel, footwear, furniture, home fashion, transportation, industrial textiles and

other sewn-products companies with the systems, certification, consulting, training and support they need to increase competitiveness and accelerate speed to market.

Built on the Microsoft .NET connection software, SQL Server® database, and Visual C# development tools, its Engineered TruCost (ETC) and Quick TruCost (QTC) solutions set the standard for industry functionality and performance with an unparalleled user experience and secure, reliable and scalable computing platform.

Select Methods Workshop global clients include Brooks Brothers (Retail Brand Alliance), Carhartt, Cupid Intimates, Dickies, Elite Sportswear, Gildan, Integrated Textile Solutions, Leonisa, NIB, Ovejita, Topy Top, UNICOR and Weissman's.
