

MWI Welcomes two new reps for the US Market

Methods Workshop International, LLC, proudly welcomes two highly experienced textile/apparel veterans to serve the USA market. They aim to enhance companies' production processes by implementing reliable work measurement systems.

FOR IMMEDIATE RELEASE

08/01/2024: Methods Workshop International, LLC (MWI), a leading developer of Predetermined Time Motion Systems (PTMS) software, proudly announces the addition of two highly experienced textile and apparel veterans to its team to service the USA market. These experts will help companies adopt reliable work measurement systems to optimize production processes.

Greg Hathcox, CEO and Co-Founder of TexTempo LLC (www.textempo.com), expressed his enthusiasm about the partnership: "We're excited to partner with MWI, expanding our portfolio of technology solutions for US cut & sew manufacturers. With a scarcity of engineering resources, sewing labor standards and costing are typically inaccurate, out of date or non-existent. MWI's Engineered True Cost delivers a scientific system to automate labor cost estimates and labor operational standards. We look forward to building the MWI brand in the USA as manufacturers add technology solutions to improve manufacturing processes."

Phil Williams, a manufacturing engineer with 30 years of experience in the apparel industry, primarily with Oxford Industries' Slacks Division, joins MWI with a strong belief in the need for advanced work measurement systems in the USA. "There is a very big need for these systems here in the USA! Engineers would get back to the work floor, solve problems, and help relate to sewing machine operators," said Williams.

ABOUT THE COMPANY

MWI, is a continuation of the original Methods Workshop, LLC that John Stern founded in the early 1980s, that created and marketed two exclusive software systems: ETC and QTC. MWI, takes over 40 years of experience in the apparel industry, consistently obtaining Standard Allowed Minutes (SAM) for any sewn product. Currently owned and administered by two partners, MWI continues to innovate and lead in the field of work measurement systems and with this new partnership will enhance it's presence in the soft goods market in the USA.
